Total RNA was prepared using acid guanidium thiocyanate-phenol-chloroform extraction. The cDNA library was custom prepared by Invitrogen Corporation. Briefly, first strand cDNA was primed using oligo(dT) containing a Notl site. Size fractionated double stranded cDNA was ligated to EcoRV-Notl cleaved vector and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 primed with a primer [5' GAGAGAGAGAGAGCTCTTTTTTTTTTTTTTTTTTTTTVN 3'], cDNA was

ADM00161

HBV

The present sequence, which inhibits the replication of hepatitis B virus (HBV) in a host cell, is a single stranded annisense oligonucleotide that binds the epsilon encapsidation sequence of a mRNA intermediate derived from the HBV genome. The lst nucleotide of the oligonucleotide corresponds to nucleotide 1884 of the HBV ayw subtype C gene, using the numbering scheme from the sequence published by Gallbert et al., Nature

Single stranded oligo:nucleotide(s) for inhibiting replication hepatitis B virus - are anti-sense to portions of the epsilon encapsidation sequence and modulate HBV function.

           This sequence represents a probe for the preCore region of hepatitis b virus (HBV). This sequence can be used in the method of the invention for detection and/or genetic analysis of hepatitis B virus (HBV) in a sample the method comprises: (a) optionally releasing, isolating or concentrating polynucleic acids (I) in the sample, and amplifying the relevant part of a suitable HBV gene in the sample with at least 1 suitable primer pair; (b) hybridising (I) with a combination of at least 2 nucleotide probes, which are applied to known locations on a solid support and hybridise specifically to mutant target sequences chosen from the HBV gene region, HBV preCore region, HBASq region and/or HBV genotype specific target sequences, or their complements or U for T homologues; (c) detecting the hybrids formed in step (b), and inferring the HBV genotype and/or mutant argent in the cample from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       281: 646 (1979). A compsn. comprising the oligonucleotide may be used to treat chronic HBV infection by modulating a HBV related function, e.g. translation, transcription, encapsidation, replication and release from a host cell. The effect of the oligonucleotide on the levels of HBV DNA in the extracellular medium (VIR. DNA), intracellular viral replicative intermediates (HBV RI), intracellular viral RNA (HBV RNA), HBV surface antigen protein (HBSAg), HBV eantigen protein (HBSAg), and HBV core antigen protein (HBCAg), given as the EC(90) (microM, 9 days of treatment) or ND (not determined), are VIR. DNA (1.6), HBV RI (5.1), HBV RNA (>20), HBSAg (>20), HBSAg (>20) and HBCAG (18.5)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid molecule; Hepatitis C virus; HCV; Hepatitis B virus; HBV; RNA stability; RNA expression; RNA synthesis; antisense; enzymatic nucleic acid; hammerhead ribozyme; DNAzyme; inozyme; zinzyme amberzyme; G-cleaver ribozyme; decoy molecule; aptamer; HBV reverse transcriptase; Enhancer I region; viral replication; degenerative; disease state; HBV infection; HCV infection; cirrhosis; liver failure; hepatocellular carcinoma; hepatotropic; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the conjugate by hydrolysis or reduction. The conjugate of the inventionary be useful during the treatment of liver diseases including chronic viral hepatitis, cirrhosis, malaria, viral or protozoan infection and cancer, such as hepatocellular carcinoma (HCC). The current sequence ithat of the NG3 A-L-P conjugate DNA component of the invention which was used to target the Hepatitis B virus (HBV) pregenome (e-site).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 26-MAR-2001; 2001US-008174789

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC the synthesis, expression and/or stability of Hepatitis C virus (HCV) or CC Hepatitis B virus (HBV) RNA. The nucleic acid molecules include antisense CC and enzymatic nucleic acids such as hammerhead ribozymes, DNAzymes, CC inozymes, zinzymes, amberzymes, and G-cleaver ribozymes. Also disclosed CC are nucleic acid decoy molecules and G-cleaver ribozymes. Also disclosed CC transcriptase and/or HBV reverse transcriptase primer sequences, as well CC as oligonucleotides that specifically bind the Enhancer I region of HBV CC DNA. The nucleic acids may be used to modulate the expression of HBV CC genes and HBV viral replication. Also disclosed is a method for screening CC compounds and/or potential therapies directed against HBV, and compounds that modulate the expression and/or replication of HCV. The compounds and CC disease states related to HBV and HCV infection, replication and gene CC expression such as cirrhosis, liver failure, and hepatocellular CC carcinoma. The present sequence represents a substrate for one of the HBV CC cribozyme, inozyme, G-cleaver, zinzyme, DNAzyme or amberzyme sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to nucleic acid molecules which modulate CC the synthesis, expression and/or stability of Hepatitis C virus (HCV) or CC Hepatitis B virus (HBV) RNA. The nucleic acid molecules include antisense and enzymatic nucleic acids such as hammerhead ribozymes (DNAzymes, CC inozymes, zinzymes, amberzymes, and G-cleaver ribozymes. Also disclosed CC are nucleic acid decoy molecules and aptamers that bind to HBV reverse CC transcriptase and/or HBV reverse transcriptase primer sequences, as well CC as oligonucleotides that specifically bind the Enhancer I region of HBV CC DNA. The nucleic acids may be used to modulate the expression of HBV CC genes and HBV viral replication. Also disclosed is a method for screening CC compounds and/or potential therapies directed against HBV, and compounds that modulate the expression and/or replication of HCV. The compounds and CC disease states related to HBV and HCV infection, replication and gene CC expression such as cirrhosis, liver failure, and hepatocellular carcinoma. The present sequence represents a substrate for one of the HBV cribozyme, inozyme, G-cleaver, zinzyme, DNAzyme or amberzyme sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     specifically cleaves RNA derived from hepatitis B virus (HBV) and comprising one or more binding arms, without requiring the presence of a 2'-OH group within the molecule for activity. The nucleic acids are useful for treating hepatitis B virus infection, hepatitis, hepatocellular carcinoma, cirrhosis and liver failure, either alone or in combination with other therapies such as lamivudine and interferons. The nucleic acids are useful as diagnostic tools to examine genetic drift and mutations within diseased cells, for detecting the presence of HBV RNA in a cell, for the study of RNA and for down-regulating gene expression of target genes in bacterial, fungal, viral, plant or mammalian cells. This sequence represents an HBV RNA target sequence, used in the scope of the invention. Note: The sequence data for this patent is also available in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hepatitis
hepatitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel enzymatic nucleic acid molecule such as DNAzymes and inozymes specifically cleaving RNA derived from hepatitis B virus and comprione or more binding arms, useful for treating hepatitis and cirrhos

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             useful for treating hepatitis B virus infection, hepatitis, hepatitis, hepatitis B virus infection, hepatitis, hepatitis, hepatitis B virus infection, hepatitis, hepaticolar treation with other therapies such as lamivudine and interferons. The nucleic acids are useful as diagnostic tools to examine genetic drift and mutations within diseased cells, for detecting the presence of HBV RNA in a cell, for the study of RNA and for down-regulating gene expression of target genes in bacterial, fungal, viral, plant or mammalian cells. This sequence represents an HBV RNA target sequence, used in the scope of the invention. Note: The sequence data for this patent is also available in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel enzymatic nucleic acid molecule such as DNAzymes and inozymes specifically cleaving RNA derived from hepatitis B virus and comprising one or more binding arms, useful for treating hepatitis and cirrhosis.
                                                                                                                                                                                                                                                      misc_difference
                                                                                                                                                                                                                                                                                             Synthetic
                                                                                                                                                                                                                                                                                                                                                 Hepatitis B

It involves contacting the test sample with means for performing a nucleic acid amplification reaction; and determining the ratio of target amplification products to internal standard amplification products present in the sample. The present sequence represents a primer/target specific probe for the hepatitis B virus (HBV) precore antigen wild-type target sequence (AAT71783). The method can be used for distinguishing between two different nucleic acid sequences present in a sample e.g. wild-type and method. The compositions can be used for quantitatively detecting the DNA
This sequence represents a probe for the preCore region of hepatitis b virus (HBV). This sequence can be used in the method of the invention for detection and/or genetic analysis of hepatitis B virus (HBV) in a sample. The method comprises: (a) optionally releasing, isolating or concentrating polynucleic acids (I) in the sample, and amplifying the relevant part of a suitable HBV gene in the sample with at least 1
                                                                                                   Claim

                          A novel method has been produced for detecting the amount of a target nucleic acid sequence which may be present in a test sample. It involves contacting the test sample with means for performing a nucleic acid amplification reaction, and determining the ratio of target amplification products to internal standard amplification products present in the sample. The present sequence represents a primer/target specific probe for the hepatitis B virus (HBV) precore antigen wild-type target sequence (AAT71783). The method can be used for distinguishing between two different nucleic acid sequences present in a sample e.g. wild-type and mutant. The compositions can be used for quantitatively detecting the DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   suitable primer pair; (b) hybridising (I) with a combination of at least 2 nucleotide probes, which are applied to known locations on a solid support and hybridise specifically to mutant target sequences chosen from the HBV RT pol gene region, HBV preCore region, HBABg region and/or HBV genotype specific target sequences, or their complements or U for T homologues; (c) detecting the hybrids formed in step (b), and inferring the HBV genotype and/or mutants present in the sample from the disgress and/or monitor HBV mutants and/or genotypes in a sample for the process and the sample for 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAT71785 standard; DNA; 19

                                                                                                                                                                                                                       A novel method has been produced for detecting the amount of a target nucleic acid sequence which may be present in a test sample. It involves contacting the test sample with means for performing a nucleic acid amplification reaction; and determining the ratio of target amplification products to internal standard amplification products present in the sample. The present sequence represents a primer/target specific probe for the hepatitis B virus (HBV) precore antigen mutant target sequence (AAT71784). The method can be used for distinguishing between two different nucleic acid sequences present in a sample e.g. wild-type and mutant. The compositions can be used for quantitatively detecting the DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Quantitative detection of target nucleic acid sequence, virus - can distinguish wild-type and mutant DNA types.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAT71789 standard;

                                                                                                  The invention relates to a short interfering nucleic acid (siNA) molecule that down-regulates expression of a hepsatitis B virus (HBV) gene by RNA interference or that inhibits HBV replication. Also disclosed are the following: (i) a method of modulating the expression of a HBV gene in a tissue explant; (ii) a method of generating a library of siNA constructs having predetermined complexity; (iii) a cell containing one or more siNA molecules (iv) a kit containing a siNA molecule which can be used to comparise in a cell, tissue or corganism, and (v) a method for synthesising a siNA molecule. The siNA comparises a sense and an antisense region, where the antisense region comprises sequence complementary to an RNA sequence encoding HBV and the sense region. Comprises sequence complementary to the antisense region. The siNA comprises the sense region and the second fragment comprises the sense region continues region and the second fragment comprises the sense region continues region and the second fragment comprises the sense region continues region and the second fragment comprises the sense region continues region and the second fragment comprises the sense region continues region and the second 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 14-MAY-1992; 92US-008B2712.

) BEIGELMAN L.
   region comprise separate oligonucleotides, and are covalently via a linker molecule. The linker molecule is a polynucleotide a non-nucleotide linker. The sense region comprises a 3'-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            'n

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   terminal overhang and the antisense region comprises a 3'-terminal overhang. The 3'-terminal overhangs each comprise about 2 nucleotides. The antisense region 3'-terminal overhang is complementary to RNA encoding HBV. The siNA is useful for treating human hepatitis B virus infections, and for characterising pathways of gene function, e.g. to inhibit activity of target genes in a pathway to determine the function of uncharacterised genes in gene function analysis. The siNA molecules may also be used in clinical, industrial, environmental, agricultural and/or research settings. The present sequence represents 1 of 1504 HBV siNA molecules of the invention.
                                                                                                                                                                                                                                                                       24-OCT-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
```

New short interfering nucleic acid molecules which down-regulates expression of a hepatitis B virus (HBV) or which inhibits HBV replication, useful for treating human HBV infections or for characterizing gene function.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          that down-regulates expression of a hepatitis B virus (HBV) gene by RNA (C) interference or that inhibits HBV replication. Also disclosed are the continue (HBV) gene by RNA (C) interference or that inhibits HBV replication. Also disclosed are the continue; (i) a method of modulating the expression of a HBV gene in a CC tissue explant; (ii) a method of generating a library of sINA constructs (C) modulate the expression of a HBV target gene in a cell containing one or more siNA (C) modulate the expression of a HBV target gene in a cell, tissue or companism; and (v) a method for synthesising a siNA molecule. The siNA containing an antisense region, where the antisense region, and comprises a sense complementary to an RNA sequence encoding HBV and the sense region (C) comprises sequence complementary to the antisense region. The siNA (C) molecule is assembled from 2 nucleic acid fragment comprises the sense region and the second fragment comprises the connected via a linker molecule. The linker solecule is a polymucleotide coverhang. The 3'-terminal overhange region comprises a 3'-terminal overhange application for treating human hepatitis B virus (C) inhibit activity of target genes in a pathway to determine the function of uncharacterised genes in gene function, e.g. to inhibit activity of target genes in a pathway to determine the function (C) and/or research settings. The present sequence represents 1 of 1504 HBV (C) sinA molecules of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

The invention relates to a short interfering nucleic acid (siNA) molecule chat down-regulates expression of a hepatitis B virus (HBV) gene by RNA contracted in the contraction. Also disclosed are the color of a laboration of a HBV gene in a tissue explant; (ii) a method of generating a library of siNA constructs containing a predetermined complexity; (iii) a cell containing one or more siNA condulating the expression of a HBV gene in a colles; (iv)a kit containing a siNA molecule which can be used to complementary in the companism; and (v) a method for synthesising a SiNA molecule. The siNA conganism; and (v) a method for synthesising a SiNA molecule. The siNA comprises sequence region, where the antisense region comprises sequence complementary to an RNA sequence encoding HBV and the sense region comprises sequence complementary to the antisense region. The siNA comprises the sense region and the second fragments, where one fragment comprises the sense region and the second fragment comprises the connected via a linker molecule, where sense region and the covalently connected via a linker molecule. The linker molecule is a polynucleotide linker. The sense region comprises a 3'-terminal overhang and the antisense region comprises a 3'-terminal overhang second compri

Morrissey D, Mcswiggen JA, Beigelman

WPI; 2003-901032/82.

New short interfering nucleic acid molecules which down-regulates expression of a hepatitis B virus (HBV) or which inhibits HBV replication, useful for treating human HBV infections or for characterizing gene function.

Claim 11; Page 41; 72pp; English.

that down-regulates expression of a hepatitis B virus (HBV) gene by RNA (interference or that inhibits HBV replication. Also disclosed are the CC following: (i) a method of modulating the expression of a HBV gene in a CC tissue explant; (ii)) a method of generating a library of sNA constructs complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing one or more sNA complexity; (iii) a cell containing on The invention relates to a short interfering nucleic acid (siNA) molecule

```
may also be used in clinical, industrial, environmental, agricultural and/or research settings. The present sequence represents 1 of 1504 HBV siNA molecules of the invention.

Gaston Cremieux, 91057 Evry cedex, PRANCE

PCR was performed on DNA from transformants of Arabidopsis thaliana

plants from IMRA (Versailles). The DNA fragment(s) resulting from

the PCR were directly sequenced from the left or the right border

to determine the genomic sequence flanking the insertion. T-DNA

derived sequences were removed. Information to order the

corresponding mutant line and a link to a database providing a

graphical display of the insertion site are available at

http://dbsgap.versailles.inra.fr/publicines/. This sequence has

been generated in the framework of the French plant genomics

been generated in the framework of the French plant genomics

http://genoplante-info.infobiogen.fr). Brunaud, V., Balzergue, S., Dubreucq, B., Aubourg, S., Samson, F., Chauvin, S., Bechtold, N., Cruaud, C., DeRose, R., Pelletier, G., Lepiniec, L., Caboche, M. and Lecharny, A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          308,
                                                                                                                                                                                                                                      Conservative
                                                                                                                                                                                                                                                                                                                                       was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 0.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pMM2 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        USA
